Digital Bridges: Shaping the Future of Digital Education

Supported by:

Erasmus+

EU Youth Programme Priority:

Digital Transformation

Topic:

Digital Participation

Youth goals:

[Quality Learning](#)

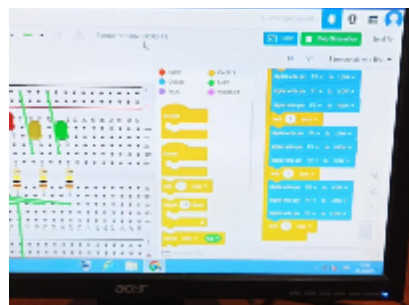

Erasmus+

After the pandemic highlighted the need for digital education, a Balkan initiative aimed to improve the technological abilities of teachers and students. It triggered a shift to digital learning, creating a community where 'digital natives' could maximise their learning potential. The project's sustainable results included new school clubs and a strengthened digital mentorship programme, and it enriched student experiences with practical skills and cultural exchanges.

What is Participation for you?

"Participation signifies active engagement at every stage of the project, ensuring broad involvement across the school. It's about achieving visible and sustainable outcomes that have a lasting impact and can serve as a foundation for future initiatives."

Valerija Karba PROJECT COORDINATOR IN SLOVENIA

Wow!

Drawing on the inspiration and skills developed during the project, students took the initiative to establish nine school clubs, each focusing on a specific area of interest. These clubs cover a diverse range of subjects such as robotics, music, journalism, sports, arts and traffic safety, providing a platform for pupils to pursue their passions and apply their newfound knowledge in a practical setting.
